TERMINAL OUTPUT
root@ccoew:/home/ccoew# python virtual_script.py
Virtual Machine Operations through Python Script

 To Start Virtual Manager

 Starting created virtual machine
Domain generic-4 started

Domain cummins started

 Listing running VM
 Id    Name                               State
----------------------------------------------------
 10    generic-4                          running
 11    cummins                            running

 Shutdown running virtual machine
Domain generic-4 suspended

 Id    Name                               State
----------------------------------------------------
 10    generic-4                          paused
 11    cummins                            running

Domain generic-4 resumed

Current running machines
 Id    Name                               State
----------------------------------------------------
 10    generic-4                          running
 11    cummins                            running
```
